Eco Learning Program

All students from Reception to Year 4 participate in garden lessons. The students attend the lessons in small groups of 3-6 students. The lessons are for 45 minutes.

In the Eco Learning Program students are guided by our SSO Ang Jones. Ang uses organic principles to assist in teaching our students how to cultivate a garden.

We cook in class groups and eat our produce. Healthy eating is encouraged, as is a lifelong work ethic.

The Eco Learning Program also grows local native plants from seeds. Once the seedlings have grown and have reached maturity the class will go on an excursion during the winter months to plant our plants. The plants have been planted at places such as Canunda National Park and Lake McIntyre.
